RECEIVED

JAN 27 1994

GROUP 3200

Sir:

In response to the Official Action of August 4, 1993, petition for extension of time and late fee attached, please amend as follows:

IN THE CLAIMS

Rewrite claims 1-10 in amended form:

--1. (amended) The method of making a multipurpose device for [enabling to hold] holding objects by clamping without damaging them comprising the steps of:

a) [...] providing a cylindrical support part, such as a rod or a tube, with a section circular or not,

b) [. mounting] placing on said support part at least two movable and removable arms which can slide along said support part and be turned around it into at least one direction [several directions, said arms extending themselves markedly on both sides from said support part in a direction mainly orthogonal thereto] and which can be easily slipped outwards thereof and inwards again,

c) [...] fitting out at least one of the movable arms at a single distance from said support part with one [substantially elastic] buffer having [which has, opposite from the arm to which it is secured,] a contact face [of] which [the basis] is essentially at a right [angles] angle to [the] said support part and under which the layer is elastic enough to act as a compression spring.

--2. (amended) A multipurpose device for holding objects by clamping [objects] without damaging them, comprising:

- a cylindrical support part, such as a rod or a tube, with a section circular or not,

- at least two movable and removable arms which can slide along said support part and be turned around it into at least one direction [several directions, said arms extending themselves markedly on both sides from said support part in a direction mainly orthogonal thereto] and which can be easily slipped outwards thereof and inwards again,
